Great, Ted.

Loreen/Valerie,

We should add this to our monthly report. How will we differentiate publications -- ours, those as a result of the external research program, and those which are outside but due to contracts in direct support of internal projects.

Max/Richard/Ted,

In your opinion, is this kind of thing (in the future) part of the external research program or in support of internal projects?

Rick,

If I had had a chance to read all of my mail before our staff meeting, I would have had the opportunity to mention a publication. Quite some time ago, at Richard's request, we commissioned a major review of SIDS by Frank Sullivan and Sue Barlow in the UK. Frank Sullivan is a retired toxicologist with a specialty in children's toxicology and a member of the Royal Academy. The review was completed quite some time ago, and both Richard and I made a number of suggestions to Frank, some of which he accepted and some of which he felt were not in line with his thinking. It was our agreement that we could make suggestions regarding the content of the review, but that he was under no obligation to accept our suggestions. Frank and Sue had submitted the review for possible publication in *Paediatric and Perinatal Epidemiology* more than six months ago. I received a letter today stating that they finally heard from Jean Goldiing that the manuscript has been accepted for publication. Dr. Golding has suggested a number of minor modifications, which the authors feel can be made in several days.

I will forward copies of the edited review as soon as I receive it.

Ted
